1) Install the module in your shop using the modules tab.

2) Rename your tabs if the SMS tab is not on the same line (make him some place !). Exemple Preferences -> Pref.

3) Create an account and make a deposit on www.smsworldsender.com

4) Fill your identification settings in the SMS tab.

5) If you want the customer to pay for SMS notifications, create a product representing the SMS service (see video http://www.youtube.com/watch?v=4x7x7IDfWjE)

6) Choose your module options, activate events you want on the "Messages management" tab, and if needed, customize their text.

7) Add cron.php to your crontab if you want to receive daily reports.
